Derating (thermal resistance): 0.144W/ °K (6.94K/W). Without a heatsink, when in free air at 25°C, the LXP18 is rated for 2.25W. Derating for temp. above 25°C is 0.018W/°K.

The case temperature is to be used for the definition of the applied power limit. The case temperature measurement must be made with a thermocouple contacting the center of the component mounted on the designed heat sink. Thermal grease should be applied properly.
